Elevators are the only gateway to multistoried buildings. Use of access control makes access to building safe. Installation of CCTV inside elevator helps monitoring of people movement and provide safety for passenger inside.

Group communication provide single point communication during emergency.

With increase in elevator travel time in high rise buildings air conditioner make elevator ride comfortable. Engaging display helps to utilize travel time for dissemination of information, advertisement or keep users engaged.

For large complexes monitoring of elevators at single place can help to protect capital equipment. It will also help to reduce overall cost and effort for monitoring health of elevators.

At Elevatech we meet all these needs at a single point.

LIFTMEDIA

– MULTIMEDIA AND GROUP INDICATORS

Lift displays can be more engaging for elevator users. The captive lift travel time when everyone inside the lift looks at display can be used for display of important notices, announcement of the building or can be explored for advertisement. Our displays can help you fulfill this with a wide range of sizes and features. This in addition to remote operating software by which one can manage 250 displays from a single server makes it more powerful.

Particular floor from
Car Operating Panel

Restriction of access
from lobby to call
elevator

LIFTXS

– ACCESS CONTROL SYSTEM

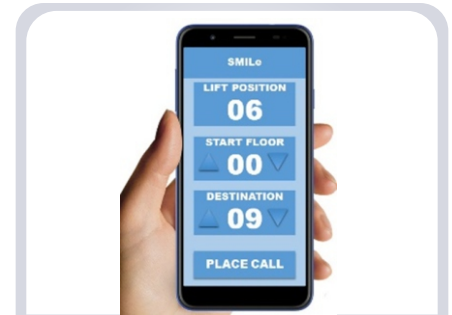

These functions can be achieved using different method based on customer convenience

**THUMB BASE
READER**

**SMART CARD BASED
READER**

**MOBILE BASED
ACCESS CONTROL**

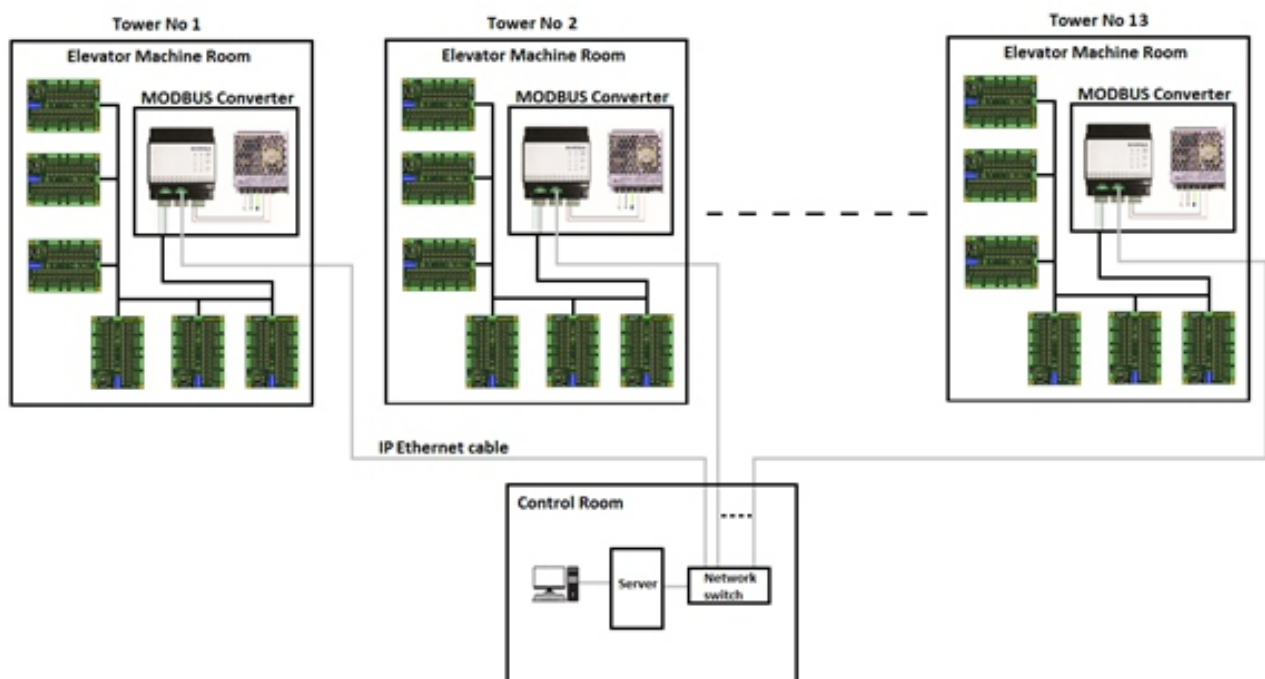

Our products
can help you to choose the right system for your customer requirement.

MARSe

– Elevator Monitoring System

For large residential and commercial complex elevator monitoring system helps to minimize cost and effort of elevator maintenance. Elevator monitoring system provides operating and emergency information of all elevators on a single computer. Coupled with our group communication, wireless CCTV and access control our EMS provides perfect solution for safety of passengers from a single desk. The system also record events, recognizes emergencies and provides necessary help from a single point.

– GROUP COMMUNICATION SYSTEM

Large residential or commercial complexes have centralized security systems. Normal intercom in elevator provide communication from lobby to car. Not every lobby will have security to answer calls. Our group communication helps to connect all elevators at centralized place so every elevator can connect to central place and get help when needed most. We offer a flexible range from 2 car group to 60 car group from a single place.

This comes with battery power back up to ensure system work during power failure as well.

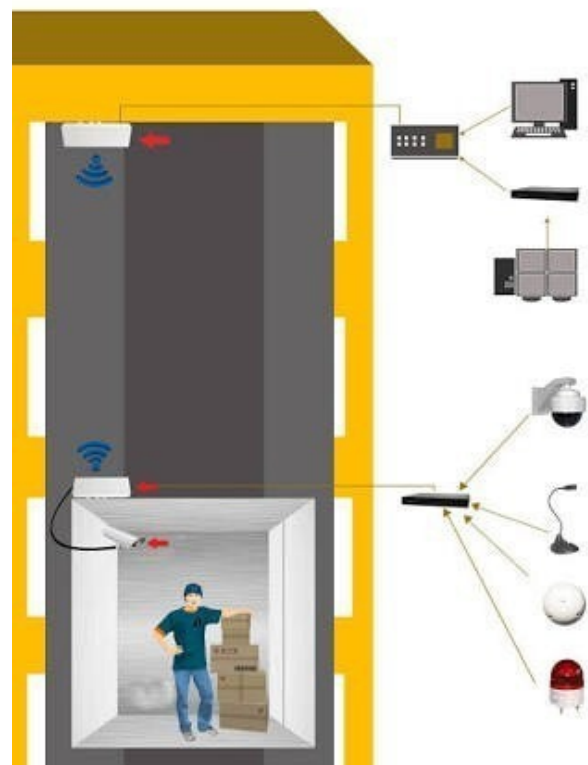

ELEVISION

– WIRELESS CCTV FOR ELEVATORS

Monitoring of the elevator inside helps to keep control on strangers entry exit, control damage of lift interior and is extremely useful to provide necessary help at time of entrapment inside the elevator.

Our wireless system ensures crisp, clear picture, no fear of breaking of cable, entanglement of cable during elevator movement. Installation is hassle-free, quick and cost effective.

Our special camera also helps to cover the complete elevator inside to ensure no portion of lift is left out from monitoring.

About us

Large residential or commercial complexes have centralized security systems. Normal intercom in elevator provide communication from lobby to car. Not every lobby will have security to answer calls. Our group communication helps to connect all elevators at centralized place so every elevator can connect to central place and get help when needed most. We offer a flexible range from 2 car group to 60 car group from a single place.
